

SLED RUNNER CATTLE COMPANY

2022 Bull Sales

Private Treaty

Big Piney & Afton, Wyoming

**Utah Beef Improvement
Association Bull Sale**

Salina, Utah – March 19, 2022

307-260-6409

www.sledrunnercattle.com

Dear Past and Potential Customers,

For those of you that I have not had the opportunity to meet yet, my name is Kailey Barlow. I am an eighth generation cattle rancher in Big Piney, WY. I cherish the fact that I was able to grow up ranching. It was that and 4-H that sparked an interest and passion for cattle genetics in me.

In 2014 I sold one of my old 4-H heifers and decided to use the funds from her to purchase my first registered Angus cow and haven't looked back since. I absolutely love being a part of the seedstock cattle industry and hope that I can continue growing my herd and supplying my customers with quality genetics for many years to come.

For those of you not familiar with my program, Sled Runner Cattle Company strives to produce bulls and females that will withstand the elements in the tough country of Western Wyoming. I truly believe that cows can and should be pretty, functional, and still have good EPD's. You shouldn't have to sacrifice one trait just to have another.

As you look through the offering, I think that you will notice that this is an excellent set of bulls. All of the bulls have been HD50k tested to confirm parentage, assure there are no genetic defects, and to provide more accurate EPD's. Every bull sold will also have passed a trich test, breeding soundness exam, and semen test. The bulls have also been PAP tested and carcass ultrasounded.

You may notice that the bulls I offer have a higher birth weight than some bulls you could buy elsewhere. That doesn't necessarily mean that they are going to throw bigger calves. Research shows that colder temperatures during a cow's third trimester lead to larger calves. With the majority of my cows calving in late February and March, they spend their entire third trimester in the coldest months of the year, in one of the coldest places there is in the United States! You can read more about how the cold temperatures affect birth weight at the following link: <https://beef.unl.edu/>

impacts-of-cold-weather-on-calf-weights.

I have two bulls consigned to the Utah Beef Improvement Association (UBIA) Bull Test Sale on March 19, 2022 in Salina, Utah. If you are interested in either of the bulls at the UBIA Bull Sale, but are unable to attend the sale, it will be live on dvauction.com or I can arrange to have someone bid on them for you. I will also bring those bulls back to Wyoming if you purchase one of them.

I will have the remainder of the bulls available private treaty. They will be able to be viewed in Big Piney or Afton. The private treaty bulls can be delivered up to 200 miles if sold for \$3,500+. Private treaty bulls will be offered on a first-come, first-served basis beginning March 21, 2022.

Thank you for supporting Sled Runner Cattle Company. Please feel free to contact me with any questions or to arrange a visit to look at the bulls. I look forward to working with you and hope that you will appreciate having a local seedstock producer.

Respectfully,

Kailey Barlow

Selling at UBIA - March 19, 2022 - Salina, UT

A product of my most fertile cow family, this bull will be an asset to nearly any operation. His sire was known to produce excellent daughters. With CED and BW EPD's in the top 5% of the breed, he will be perfect for use on heifers, but he still has WW and YW EPD's in the top 35% and 20%, respectively, making him a bull that should also sire calves that will push down the scales come shipping time.

J02 has impressed me since birth with his remarkable dimension and circumference of bone. His young dam did an exceptional job raising this calf. Take a look at this bull's pedigree – with so many great sires and dams in his pedigree, how could you go wrong? His growth EPD's are in the top 10% of the breed and his \$W lands in the top 1%. This isn't a bull that just looks good on paper. He is equally as impressive from a phenotype standpoint.

Safe for use on heifers, this bull is out of a cow that has consistently bred up early every year. Combine that with his sire that is known to offer real-world maternal genetics, this bull is a great option for those that are wanting to keep their own replacement heifers and will sire calves that will not disappoint at weaning.

This bull should mature to be a moderate sized powerhouse. His pedigree is packed with maternal genetics, but he still has excellent growth numbers. I would recommend him for use on cows, as he is a little wider through his chest floor and deeper made. His young dam is quickly rising to the top of the herd. J07, J08, and J09 all are from the same exceptional cow family.

The most powerful bull of the group, this bull has been a standout since the day he was born. He had an impressive weaning ratio of 112 and should transmit that growth to his offspring. His dam has a picture perfect udder and has raised several daughters that I have kept in my herd. J07, J08, and J09 all are from the same exceptional cow family.

This is a bull that should sire stout calves with a lot of eye-appeal. His sire has been a favorite among commercial cattlemen who appreciate good-looking cattle with moderate birth weights, solid growth, strong carcass value, and maternal function. J07, J08, and J09 all are from the same exceptional cow family.

J13 is what I would describe as a good all-around bull. Though his EPD's indicate he would be great for use on heifers, I would recommend only using him on heifers with supervision. He has the highest \$C, \$B, and \$M of the offering. I successfully showed his maternal brother in 2021 and used him as a herd sire for my cows. This bull should excel in a variety of programs.

J15 is a good bull with a strong level topline and long square hip. He should be safe for use on heifers with supervision. This is the only bull in the offering to post a positive double digit \$EN and would be a great choice for those with limited feed resources that need cattle to gain more on less feed. His dam is an easy keeping cow with a lot of depth of body.

J16 comes from an Alliance 187 dam that is a practical, problem free cow that works well in our tough environment. She has raised several nice bull calves that have gone out and worked on large ranches. I would recommend using this bull on cows only as his calves will most likely come with a little more birth weight.

As one of the younger bulls in the offering, I think J19 is one that could be easily overlooked. He is safe for use on heifers, has moderate growth numbers, and will mature to be a bull with muscle dimension and shape. With a Certified Angus Beef "Targeting the Brand" logo on his pedigree, this is a bull that people should consider if they are selling from pasture to plate.

J20 is a heifer bull with an actual BW of 67 pounds. He is a young bull with a birth weight EPD in the top 30% and a CED in the top 5% of the angus breed, yet still has better than average growth EPD's. His carcass EPD's and \$ values land him in the top 1/3 of the breed. He is a good all around bull.

Thank you for your consideration! I look forward to talking to you and showing you the bulls.
